HANITA Lenses

The Extend™ Monofocal Plus IOL

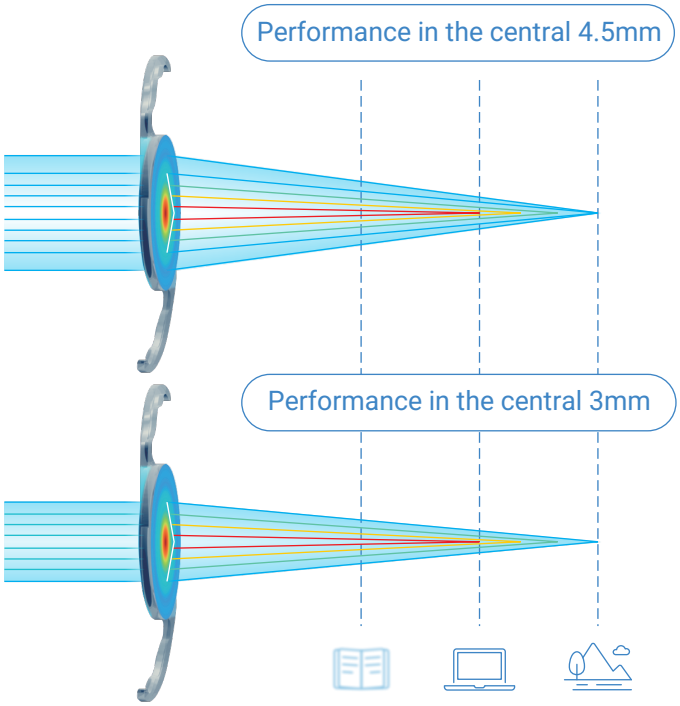

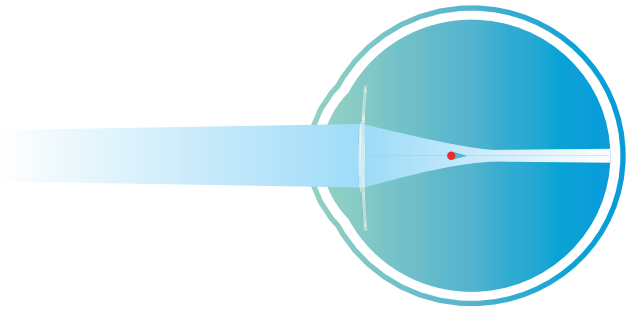

Bessel beams, characterized by their unique non-diffractive propagation, "needle-shaped beam" profile[1], and self-healing capabilities, are increasingly applied in ophthalmology for high-resolution imaging and enhanced fixation targets[2].

Clinical Advantages from Bessel Optics

The Extend™ IOL, powered by Bessel optics, delivers an extended depth of focus rather than a single focal point, to cover both distance and intermediate vision without the complexity of multifocal designs.

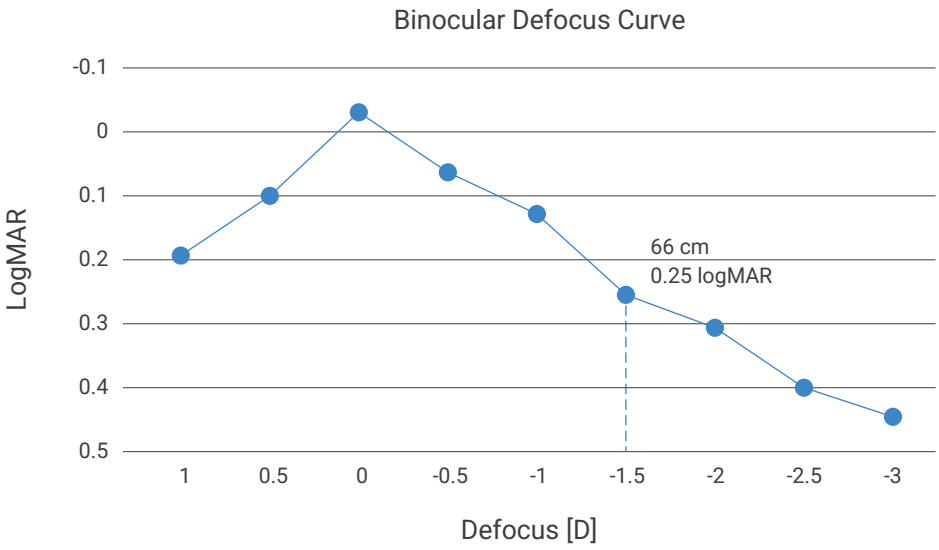

The self-healing mechanism[3] of Bessel beams enables them to restore their structure when partially obstructed, as unblocked wavefronts re-interfere to maintain stable imaging. This suggests the IOL might tolerate optical path obstructions like low-level posterior capsule opacification (PCO) or floaters.

Extend Your Patients' Vivid Moments With Clarity

Distance vision comparable to a standard monofocal IOL, along with functional intermediate vision.

Extend™: Bianchi et al., Highlights of Ophthalmology 2023;51(2).

Full Range Binocular Vision

By using a mini-monovision approach targeting low myopia in the non-dominant eye, a full range of functional vision can potentially be achieved.

One eye: **emmetropia**

The other eye: **mild myopia**

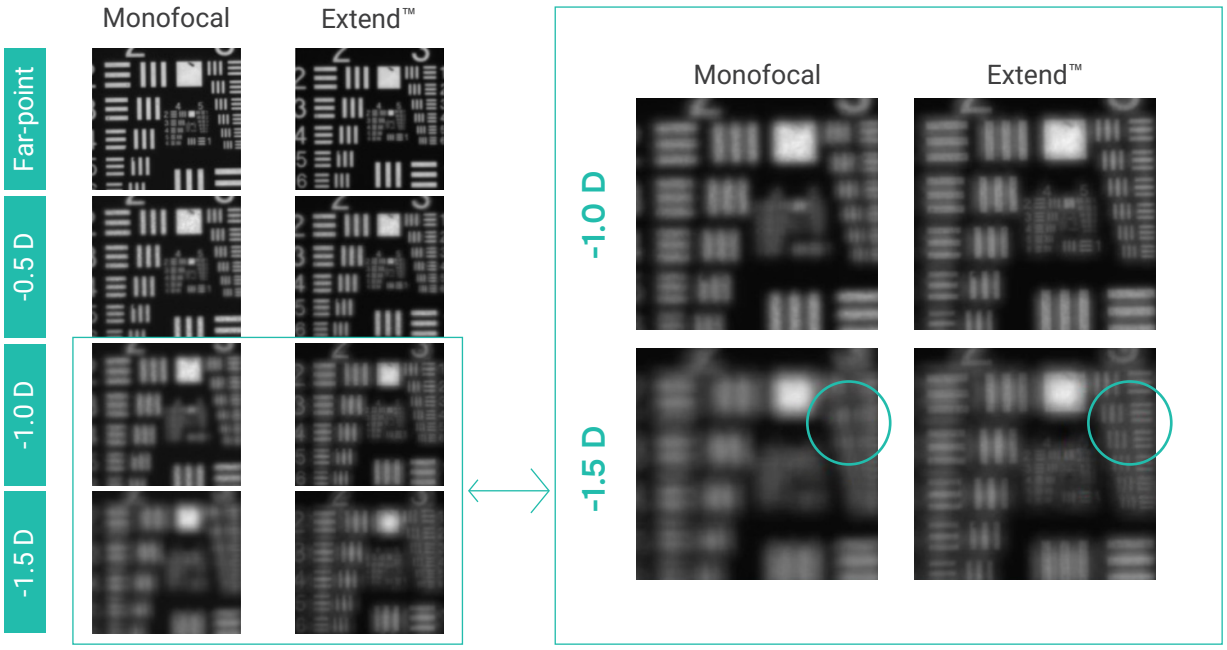

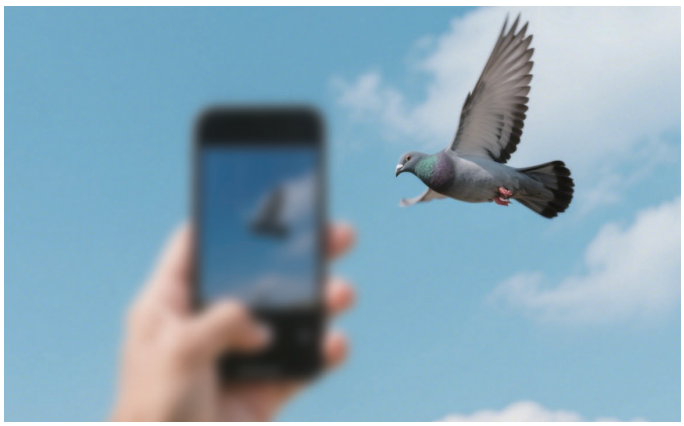

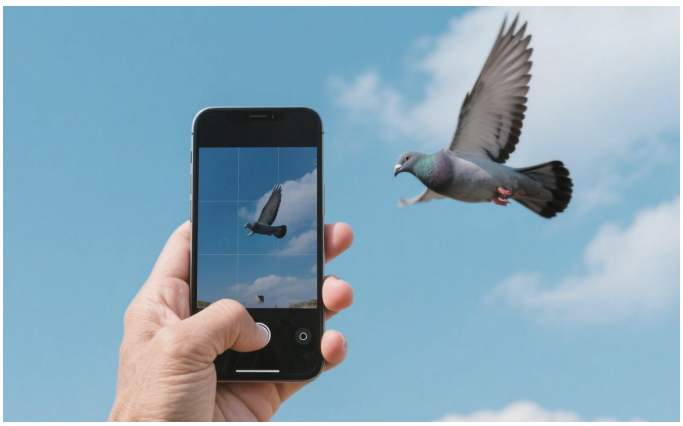

Extend™: Bessel-Powered Monofocal Reinvented

When tested with USAF target images, monofocal IOLs are sharp only at their preset focal point (e.g., distance "Far-point" row), with marked blurring at off-focus states (-1.0 D to -1.5 D). In contrast, the Extend™ IOL, using Bessel-powered extended-focus technology, maintains discernible target clarity across all tested refractive states, enabling continuous distance-to-intermediate vision and outperforming monofocal designs.

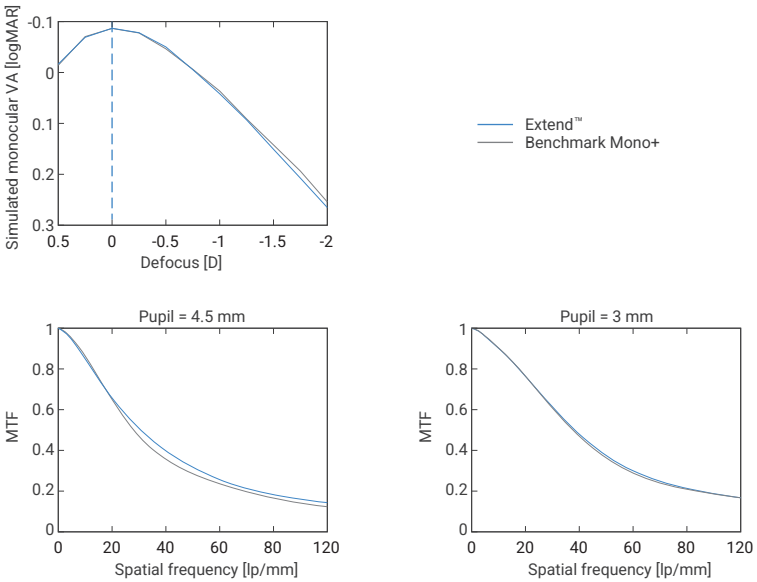

DAVID J APPLE LABORATORY

IOL Model	Benchmark Mono+	Extend™
Optimally saturated		

Polychromatic PSF images taken at optimal saturation with a pupil diameter of 4.5 mm. Both IOLs show comparable light distribution with a speckle-like pattern outside the PSF core.

Simulated VA demonstrated that at far focus, the Extend™ IOL achieves a high-acuity logMAR of -0.09, with stable vision maintained across a broad defocus range, enabling clear sight from far to intermediate distances.

The Extend™ IOL delivers strong MTF performance: high detail retention at 50 lp/mm (0.32) with a 4.5-mm pupil for low-light clarity, and reliable contrast in bright-light conditions with a 3-mm pupil[1].

1. Kremser, F., Yan, W., Khoramnia, R., et al. Monofocal intraocular lens based on the Bessel principle for improved intermediate vision: a comparative assessment. BMC Ophthalmol 26, 336 (2026). https://doi.org/10.1186/s12886-026-04973-9

By addressing three key aspects—light-spot focusing, vision stability, and detail recognition in both day and night conditions—data show that the Hanita Lenses Extend™ IOL provides sharp distance vision, covers intermediate viewing ranges, and maintains clarity in low-light environments. This makes it particularly beneficial for patients who require high-quality postoperative vision, such as night driving.

Hanita Lenses Extend™ SL

OPTIC CHARACTERISTICS	
Diopter range (SE)	+5.0 to +30.0 D (0.5 D increments) +31.0 to +34.0 D (1.0 D increments)
Optical design	Modified high-order aspheric for extension of the depth of focus
GEOMETRIES	
Optic diameter	6.0 mm
Total diameter	13.0 mm
Haptic configuration	C-loop
Edge design	Square edge
Haptic angulation	5°
MATERIAL SPECIFICATIONS	
Material	Hydrophobic acrylic with bonded UV absorber and violet light filter
Refractive index	1.48 (@ 35 °C)
Abbe number	49
Filtration	UV and violet light
OPTICAL BIOMETRY	
SRK/T: A-constant	119
Holladay II: ACD	5.549
CONTACT ULTRASOUND BIOMETRY	
SRK/T: A-constant	118.5
Holladay II: ACD	5.257
RECOMMENDED DELIVERY SYSTEM	

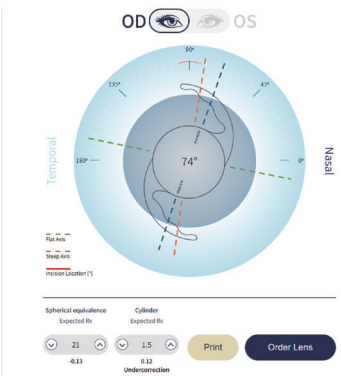

Preloaded
injector: Accuject 2.2

Hanita Lenses Extend™ SL Toric

OPTIC CHARACTERISTICS	
Diopter range (SE)	+5.0 to +30.0 D (0.5 D increments) +31.0 to +34.0 D (1.0 D increments)
Cylinder range	1.0, 1.5, 2.25, 3.0 D (+5.0 to +9.5 D); adds 3.75, 4.5 D (+10.0 to +34.0 D)
Optical design	Modified high-order aspheric for extension of the depth of focus

Extend™ IOL by Hanita Lenses

Pioneering a new era of monofocal IOL technology.

- Distance vision comparable to standard monofocal IOLs
- Functional intermediate vision
- Excels in low light
- More tolerant of visual disturbances
- Overall performance comparable to the industry benchmark

For healthcare professionals only.

Please read the Instructions for Use for important safety information and consult our specialists if you have any questions.
