

Intensity Pentafocal IOL

Everyone Deserves To See
The World's Beauty.

 **HANITA**
Lenses

Just Diagnosed with Cataracts? You're Not Alone.

Here at Hanita Lenses, we understand that this news can feel overwhelming - but it's also the first step toward clearer vision and a better quality of life.

Today, Cataract Surgery is Fast, Simple & Effective, Here's what to expect...

1

An experienced surgeon removes the cloudy lens with cataract from inside the eye.

2

An intraocular lens (IOL) – a modern artificial lens made from super soft acrylic material - is implanted in the eye through a microincision.

3

Once inserted in the eye, the IOL replaces your focusing power lost due to the cataract, restoring your vision.

Regular IOLs

Limited range of vision (often near or far only)

Halos and glare can interfere with night vision

Often need glasses for some tasks

Intensity IOL

Perfect focus at any distance

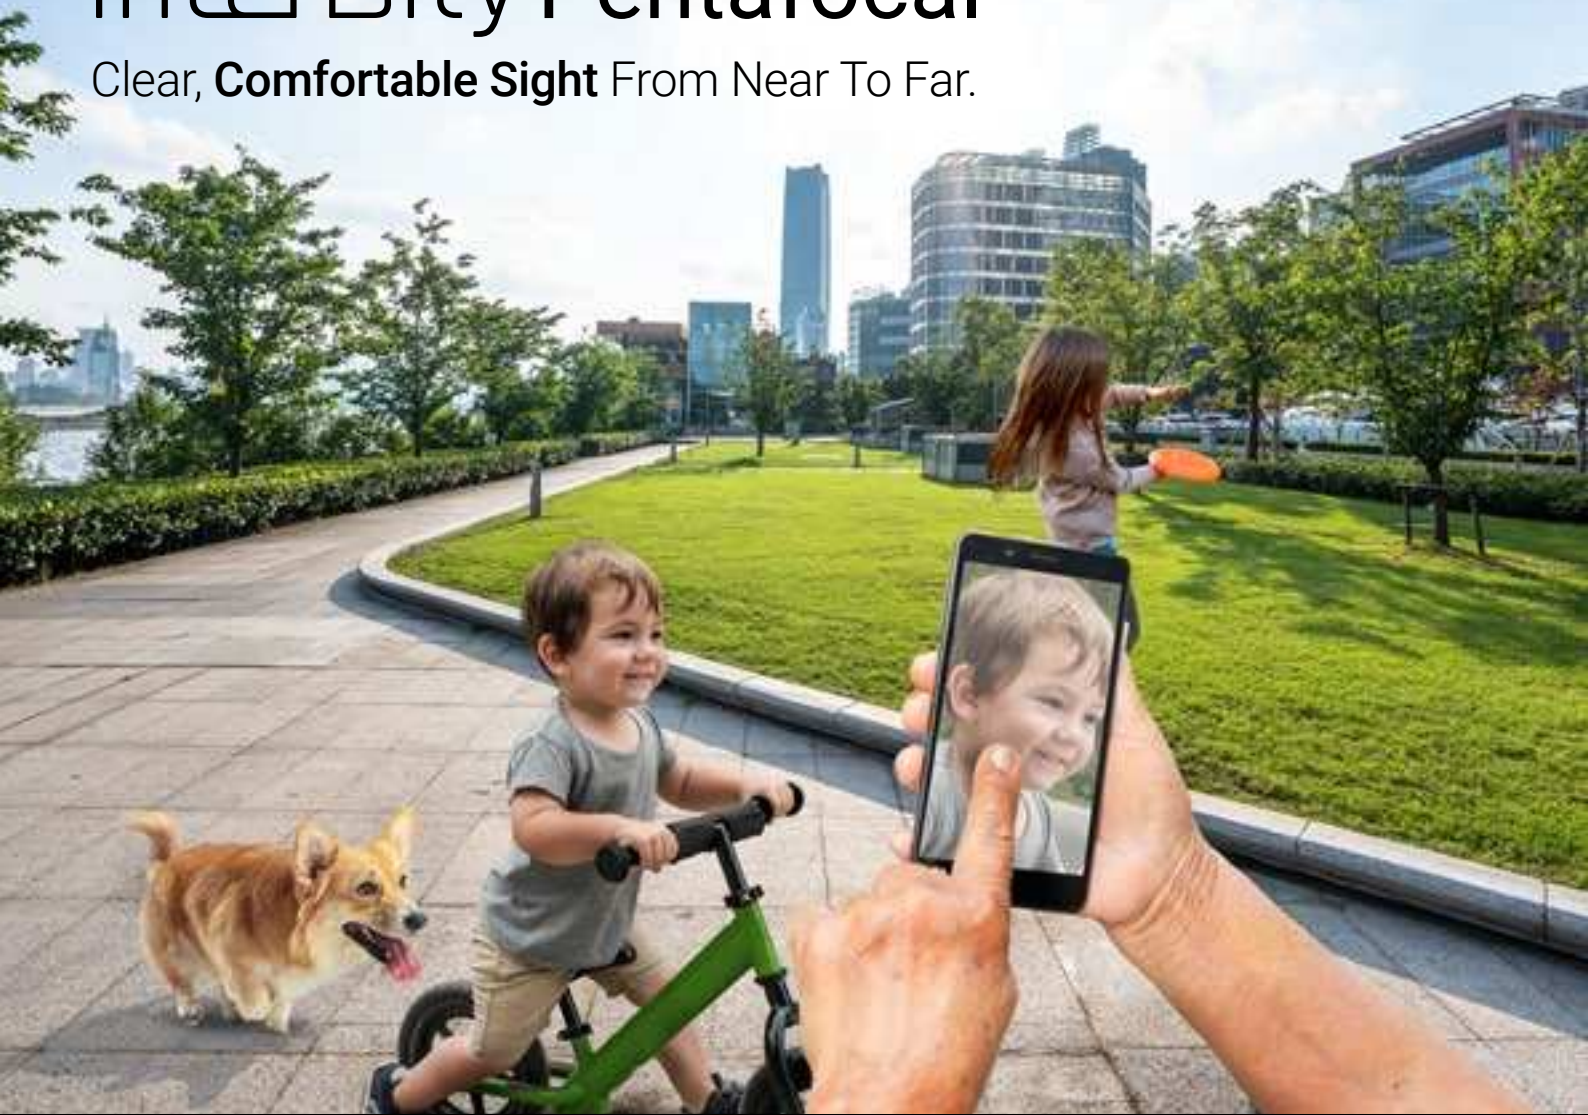

Designed for minimal halos and improved night driving

Spectacle independence for most daily activities

Intensity Pentafocal

Clear, **Comfortable Sight** From Near To Far.

Drive at night

Drive during
the day

Watch TV

Cook

Read traffic signs

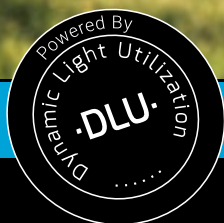

Recognize faces
and people

Read via phone
and large prints

Read small print
(IFUs, labels)

The Intensity IOL's breakthrough technology is protected by international patents

Spectacle Independence

Enjoy clear vision at far, intermediate, and near distances — with little to no need for glasses.

Full Daily Functionality
